

PayID & GST Integration Guide

Jack's Barber Style Website

Wodonga, Victoria, Australia

A complete reference for accepting PayID payments on your booking website while meeting Australian GST and tax invoice requirements.

Prepared: June 2026

Applies to: jacks-barber-style website (PayID only - no card processors)

Disclaimer: This guide is for planning purposes only. Consult your accountant or registered tax agent for advice specific to your business structure and turnover.

1. Overview

Jack's Barber Style accepts online bookings with PayID payment - Australia's instant bank transfer system. No Stripe. No card fees. This guide covers PayID setup, website integration, and GST compliance for every sale, tax invoice, and BAS lodgment.

Your website setup

- Website: Jack's Barber Style booking site (Vercel deployment)
- Payments: PayID only (instant bank transfer via customer's banking app)
- Flow: Client books -> sees PayID + amount + reference -> pays in bank app -> booking confirmed
- Key files: server/payments.js, server/gst.js, api/payments/webhook.js
- Services priced in settings (e.g. Skin Fade \$40, Afro Cut \$45, Home travel fee \$15)
- Transactions recorded in transactions.json with GST split in Staff > Finances

What you will achieve

- Clients can pay by PayID (phone, email, or ABN) from their banking app
- Payments reconcile automatically to bookings where possible
- Every sale includes correct GST breakdown on tax invoices
- Records are ready for quarterly/monthly BAS reporting

2. Understanding PayID

PayID is part of Australia's New Payments Platform (NPP). It lets people send money using an easy identifier - mobile number, email address, or Australian Business Number (ABN) - instead of BSB and account number. Funds typically arrive in seconds, 24/7, via Osko.

PayID vs PayTo vs Osko

Term	What it is	Relevance to your website
PayID	Address (e.g. 0478268399 or your@email.com)	What customers type in their bank app
Osko	Brand name for instant NPP payments	The speed layer behind PayID transfers
PayTo	Authorised real-time bank debit (NPP)	Optional gateway feature - not required for basic PayID

Benefits for a barber shop

- No card processing fees (PayID bank transfers are usually free or low-cost for businesses)
- Instant confirmation - useful for same-day bookings
- No chargebacks (unlike cards)
- Customers trust paying a verified business name in their banking app

Limitations

- Customer must use their banking app to send the payment
- Static PayID requires matching bank deposits to booking references (unless using Azupay webhook)
- PayID cannot be 'swiped' like a card - instructions must be clear on the booking page

3. Integration Options (PayID Only)

There are two practical paths - both use PayID directly, with no card processors.

Option A - Static PayID (Recommended to start)

Register a PayID with your business bank (mobile 0478268399 or business email). The website shows PayID, exact amount, and booking reference after each booking. You confirm payment in Staff when funds arrive - or automate later with Azupay.

Steps

- 1. Register PayID in your bank app (CommBank, NAB, Westpac, ANZ, etc.)
- 2. Add PAYID and PAYID_NAME to Vercel environment variables
- 3. Redeploy - booking form now shows PayID payment instructions
- 4. When customer pays, match reference (e.g. b1719567890) in bank feed
- 5. Mark booking as paid in Staff area (or wait for Azupay webhook)

Pros / Cons

- Pros: Free, no third-party fees, works immediately, no API contract
- Cons: Manual confirmation unless you add Azupay (Option B)

Option B - Azupay (Automatic confirmation)

Azupay provides PayID payment requests with a hosted checkout and real-time webhooks. When payment arrives, your website auto-confirms the booking - no manual step.

Provider	Best for	Website integration
Azupay	Dynamic PayID per booking, hosted checkout	REST API + webhook at /api/payments/webhook
Monoova	PayID receivables, reconciliation APIs	Create PayID per payment request; webhook on receipt
Westpac QuickStream	Larger businesses, PayID Biller	REST API; domain-linked PayIDs (e.g. pay@yourdomain.com.au)

Azupay setup for Jack's Barber Style

- 1. Sign up at azupay.com.au and complete business verification
- 2. Add AZUPAY_CLIENT_ID, AZUPAY_SECRET to Vercel
- 3. Set webhook URL: <https://your-site.vercel.app/api/payments/webhook>
- 4. Client books -> redirected to Azupay checkout OR sees dynamic PayID
- 5. Webhook calls markBookingPaid() - booking auto-confirmed
- 6. Static PAYID still works as fallback if Azupay API is unavailable

4. Recommended Architecture (Static PayID + GST)

For Jack's Barber Style, start with static PayID (free, immediate) and add Azupay later if you want automatic confirmation.

Payment flow

```
Client -> Booking form -> Server saves booking
      -> Shows PayID + exact amount + booking reference + GST breakdown
      -> Client pays in banking app
      -> Azupay webhook OR staff marks paid
      -> markBookingPaid() + tax invoice email
      -> Booking confirmed + reminder scheduled
```

Environment variables (Vercel)

Variable	Purpose	Example
PAYID	Your business PayID	0478268399
PAYID_NAME	Name shown in bank app	Jack's Barber Style
SITE_URL	Site base URL	https://jack-barber-rho.vercel.app
BUSINESS_ABN	Tax invoices	XX XXX XXX XXX
GST_REGISTERED	Show GST on receipts	true
AZUPAY_CLIENT_ID	Optional auto-confirm	from Azupay dashboard
AZUPAY_SECRET	Optional auto-confirm	from Azupay dashboard

Already built in your website

- server/payments.js - PayID instructions and optional Azupay API
- server/gst.js - GST calculation (total / 11)
- js/booking.js - PayID payment panel after booking
- api/payments/webhook.js - Azupay payment confirmation webhook
- PAYID-SETUP.txt - step-by-step configuration guide

5. GST Fundamentals for Barber Services

Hairdressing and barber services are taxable supplies in Australia. If your GST turnover is \$75,000 or more in a 12-month period, you must register for GST with the ATO. Once registered, you charge 10% GST on taxable sales and report it on your BAS.

Registration checklist

- Obtain an ABN if you do not have one (abr.gov.au)
- Register for GST via ATO online services or through your tax agent
- Choose accounting method: cash basis (common for small business) or accrual
- Choose reporting cycle: quarterly BAS (most common) or monthly if required
- If turnover under \$75,000: GST registration is optional (but you cannot claim input tax credits without it)

How GST applies to your service prices

Your website prices (e.g. \$40 Skin Fade) should be treated as GST-inclusive once registered. The GST component is 1/11 of the total price.

Service	Price (inc. GST)	GST (1/11)	Ex-GST amount
Skin Fade	\$40.00	\$3.64	\$36.36
Afro Cut	\$45.00	\$4.09	\$40.91
Twists & Retwist	\$50.00	\$4.55	\$45.45
Home travel fee	\$15.00	\$1.36	\$13.64
Beard Trim	\$25.00	\$2.27	\$22.73

GST calculation formulas

GST from inclusive price: $\text{GST} = \text{Total} / 11$
 Ex-GST amount: $\text{Net} = \text{Total} - \text{GST}$ (or $\text{Total} * 10/11$)
 Price ex-GST to inc-GST: $\text{Total} = \text{Net} * 1.10$

Example: Skin Fade \$40.00 inclusive -> $\text{GST} = 40 / 11 = \$3.64$ (rounded). Always round GST to the nearest cent (0.5 cents rounds up).

6. Tax Invoice Requirements

When GST-registered, you must issue a tax invoice for taxable sales over \$82.50 (including GST) or whenever a customer requests one (within 28 days). PayID payments do not change these rules - you still need a proper tax invoice.

Required fields (sales under \$1,000)

- The words 'Tax Invoice'
- Your business name: Jack's Barber Style
- Your Australian Business Number (ABN)
- Date the invoice is issued
- Description of services (e.g. 'Skin Fade - in-shop, 15 Jun 2026 10:00 AM')
- Quantity and price (or a statement that total price includes GST)
- GST amount payable OR statement 'Total price includes GST'
- Extent to which each item is a taxable sale

Additional requirement for invoices \$1,000+

- Customer's identity or ABN must appear on the invoice

Sample tax invoice layout

TAX INVOICE
 Jack's Barber Style
 47 O'Meara Street, Wodonga VIC 3690
 ABN: [Your ABN]
 Phone: 0478 268 399 | Email: Jacqueskatumbulu@gmail.com

Invoice #: INV-2026-0042 Date: 28/06/2026
 Booking ref: bk_abc123

Bill to: John Smith
 john@example.com

Description	Qty	Amount
Skin Fade - in-shop (Taxable supply - GST included)	1	\$40.00
Subtotal (ex GST)		\$36.36
GST (10%)		\$3.64
TOTAL (inc GST)		\$40.00

Payment method: PayID
 Payment reference: bk_abc123
 Paid: 28/06/2026

PayID on tax invoices

You may show your PayID as a payment option on invoices (e.g. 'Pay via PayID: 0478268399'). Always include the exact amount and a unique reference (booking ID) so you can reconcile payment. After payment is confirmed, issue the tax invoice as a receipt.

7. BAS Reporting & Record Keeping

Simpler BAS (turnover under \$10 million)

Most small businesses report three amounts each BAS period:

BAS Label	What to report	Your source
G1	Total sales (inc GST)	Sum of transactions.json amounts for the period
1A	GST on sales	Sum of GST portions (total / 11 for taxable sales)
1B	GST credits on purchases	GST paid on business expenses (rent, supplies, tools)

PayID bank transfers have no card processing fees - your records are simpler. Keep bank statements and booking references for each deposit.

Records to keep (5 years minimum)

- Tax invoices issued to customers
- Payment records (bank statements, PayID transaction list, Azupay dashboard if used)
- Booking records (bookings.json / admin export)
- Expense receipts with GST shown
- BAS worksheets or accounting software reports (Xero, MYOB, QuickBooks)

Recommended accounting software integration

- Xero / MYOB / QuickBooks - import bank feed; match PayID deposits to booking references
- Match each deposit to a booking reference for clean audit trail
- Use bank rules to auto-categorise recurring expenses

8. Step-by-Step Implementation Roadmap

Phase 1 - Business & GST setup (Week 1)

- Confirm ABN and register for GST if turnover requires it
- Decide: all prices GST-inclusive (recommended for consumer-facing barber shop)
- Open or verify business bank account; register PayID with your bank
- Choose integration: static PayID (Option A) or Azupay (Option B)

Phase 2 - PayID on website (Week 1-2)

- Add PAYID and PAYID_NAME to Vercel; redeploy
- Test booking: PayID instructions appear with correct amount and reference
- Optional: configure Azupay for automatic webhook confirmation
- Test full flow: book -> pay in bank app -> confirm -> booking status = confirmed

Phase 3 - GST & invoicing (Week 3-4)

- Add gst.js helper with calculateGstFromInclusive(total) function
- Auto-generate tax invoice on markBookingPaid() - email PDF to client
- Update admin Finances view to show: Gross | GST | Net columns
- Add monthly/quarterly export CSV for BAS preparation

Phase 4 - Go live & monitor (Week 3+)

- Remove any old STRIPE_* environment variables from Vercel
- Update website: payment messaging says PayID only
- Monitor first 10 transactions for correct amounts and GST
- Lodg first BAS with accountant review

9. Code Reference - GST Helper

Add this module to support GST calculations across payments and invoices:

```
// server/gst.js
const GST_RATE = 0.10;

function isGstRegistered() {
  return process.env.GST_REGISTERED === 'true';
}

function gstFromInclusive(totalIncGst) {
  if (!isGstRegistered()) return 0;
  return Math.round((totalIncGst / 11) * 100) / 100;
}

function netFromInclusive(totalIncGst) {
  return Math.round((totalIncGst - gstFromInclusive(totalIncGst)) * 100) / 100;
}

function breakdown(totalIncGst) {
  const gst = gstFromInclusive(totalIncGst);
  return { total: totalIncGst, gst, net: totalIncGst - gst };
}

module.exports = { isGstRegistered, gstFromInclusive, netFromInclusive, breakdown };
```

PayID payment response (already in server/payments.js)

```
// Returned to booking form after POST /api/bookings
{
  ok: true,
  id: 'b1719567890123',
  amount: 40,
  payment: {
    method: 'payid',
    payId: '0478268399',
    amount: 40,
    reference: 'b1719567890123',
    gst: 3.64,
    net: 36.36,
    instructions: ['Open your mobile banking app', ...]
  }
}
```

Transaction record with GST

```
// Inside markBookingPaid - add GST fields
const { breakdown } = require('./gst');
const b = breakdown(details.amount);
transactions.unshift({
  id: 't' + Date.now(),
  amount: b.total,
  gst: b.gst,
  net: b.net,
  paymentMethod: details.method || 'payid',
  // ... existing fields
});
```

10. Provider Comparison & Costs

Method	Typical fees	Auto reconcile	Dev effort	Best for
Static PayID	Free (bank transfer)	Manual	Done	Start immediately
Azupay PayID	Per-transaction API pricing	Yes (webhook)	Low	Auto-confirm bookings
Monoova PayID	Per-transaction pricing	Yes (webhook)	Medium	High volume
Westpac QuickStream	Enterprise pricing	Yes (webhook)	High	Large businesses

Decision matrix

- Static PayID: Best to launch now - free, no contracts, already built into your site
- Azupay: Best when you want bookings auto-confirmed without checking the bank
- Never use Stripe for PayID - use your bank PayID or an NPP specialist directly

11. Compliance Checklist

Before accepting PayID payments

- ☐ ABN active and displayed on website/invoices
- ☐ GST registered (if turnover $\geq$ \$75,000 or voluntarily registered)
- ☐ Business bank account with PayID registered
- ☐ Prices confirmed as GST-inclusive or GST-exclusive (display clearly to customers)
- ☐ Tax invoice template prepared
- ☐ Privacy policy updated if storing payment references

Before go-live on website

- ☐ PayID registered with business bank account
- ☐ PAYID and PAYID_NAME set on Vercel and site redeployed
- ☐ Webhook endpoint tested (POST /api/payments/webhook returns 200)
- ☐ Test booking: correct amount, GST breakdown, confirmation email
- ☐ Admin Finances shows payment with booking link
- ☐ Cancelled/unpaid booking flow still works

Each BAS period

- ☐ Export sales from admin or accounting software
- ☐ Verify G1 total matches bank PayID deposits
- ☐ Calculate 1A (GST collected) - use total taxable sales / 11 if all prices inclusive
- ☐ Gather expense receipts for 1B (GST credits)
- ☐ Lodge BAS by due date (28th of month after quarter end for quarterly lodgers)

12. Official Resources & Links

Resource	URL
ATO - Register for GST	business.gov.au/registrations/register-for-taxes/register-for-goods-and-services-tax-gst
ATO - Tax invoices	ato.gov.au/businesses-and-organisations/gst-excise-and-indirect-taxes/gst/tax-invoices
business.gov.au - How to invoice	business.gov.au/finance/payments-and-invoicing/how-to-invoice
Azupay PayID developer docs	developer.azupay.com.au/docs/receive-payid-payments
Westpac QuickStream PayID	quickstream.westpac.com.au/docs/payid
NPP Australia (PayID)	nppa.com.au/payid
Your PayID setup guide	PAYID-SETUP.txt in project root

13. Support & Next Steps

Your website is configured for PayID only - no Stripe. Start with static PayID (register with your bank, add PAYID to Vercel), then add Azupay if you want automatic confirmation.

Suggested immediate actions

- 1. Confirm your ABN and GST registration status with your accountant
- 2. Register PayID on your business bank account (mobile or email)
- 3. Add PAYID=0478268399 and PAYID_NAME to Vercel environment variables
- 4. Remove any STRIPE_SECRET_KEY and STRIPE_WEBHOOK_SECRET from Vercel
- 5. Redeploy and test a booking - PayID instructions should appear

Document generated for Jack's Barber Style - 47 O'Meara Street, Wodonga VIC 3690. For setup steps see PAYID-SETUP.txt in the project root.
